Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

ARIA

- ▲ Elements with an ARIA `[role]` that require children to contain a specific `[role]` are missing some or all of those required children.

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

BEST PRACTICES

- ○ Uses ARIA roles only on compatible elements
- ○ Identical links have the same purpose.

These items highlight common accessibility best practices.
